

Assignment 4

1. (2) Write a serializable version of your class `TriangularPrism` and write 7 triangular prisms into the binary file "prisms3.ser". After that, read the content of the file onto the screen.
2. (2) Write a program that sends a GET and proper POST requests to a public free REST API (choose one, e.g., [OpenWeatherMap API](#), [REST Countries API](#), etc), receives a response, and prints status code and body in the text file. Note: REST is acronym from Representational State Transfer.
